

## **RENWEX 2020 and the International Forum on Renewable Energy for Regional Development will be held on October at EXPOCENTRE Fairgrounds.**

RENWEX 2020. International Exhibition for Renewable Energy and Electric Vehicles and the International Forum on Renewable Energy for Regional Development, where advanced developments in the field of renewable energy are presented, will take place at EXPOCENTRE Fairgrounds from October 20 to 22, 2020.

"Creating the future of renewable energy together" - this is the motto of the event, aimed at unlocking the industry potential, as well as to develop specific practical recommendations for creating the foundation for the growth of renewable energy.

Microgeneration, solar and wind power plants, geothermal and hydro energy, biofuels, hydrogen energy – these are important issues of today's energy agenda. The reduction of the renewable energy cost and the updating of the climate doctrine have encouraged close attention to this area.

The forum and the exhibition face a number of difficult challenges. These are active assistance in the development of the retail market of renewable energy in Russia, the popularization of advanced technologies and environmental engineering, the introduction of innovative equipment, discussion of topical issues in the context of regional energy, demonstration of scientific and technological potential of Russia.

The RENWEX exhibition is aimed at creating a networking platform for consumers and manufacturers of renewable energy. Already today the event helps to develop the business emerging in the promising renewable energy industry. According to the results of RENWEX 2019, about 90% of exhibitors have reached the goal of searching for suppliers, and 98% claim that they are satisfied with the quality of business contacts. These figures show the effectiveness of the exhibition as a communication channel between suppliers of renewable energy equipment and those interested in this new direction of the energy sector.

RENWEX is a platform that brings together key representatives of business community, state and scientific organisations working in this sphere. In 2019 the exhibition united not only Russian companies but 63 companies from 9 countries: Austria, China, France, Germany, Netherlands, Russia, Slovakia, Switzerland and Turkey. The number of visitors rated to 3 519 people from 42 countries. Within the framework of the exhibition 13 business events took place, in which more than 120 speakers and over 2000 delegates took part.

Among the product sectors of the exhibition are wind energy, solar energy, hydropower, bioenergy, biogas and solid biofuels, geothermal energy, energy and resource-saving technologies, electric vehicles and others.

During the International Forum on Renewable Energy for Regional Development topical issues of the industry development will be discussed, such as development of the retail market of RES and the necessary technical solutions, statutory regulation of RES, the use of RES in the energy supply for remote and isolated consumers, the use of biofuels and waste disposal, international experience in the development of renewable energy, digitalization of modern energy, the development of electric vehicles and related infrastructure, the development of systems at the regional level. A whole day will be devoted to microgeneration issues.

Special focus will be on the trend of the XXI century - electric vehicles. The exhibition will bring together the most important manufacturers in this field. The presence of companies that have recently attracted interest within the industry will allow visitors to see a wide exposition of electric vehicles, as well as to test them in action.

The exhibition and the forum will be attended by representatives of government authorities, business community, expert and public organisations, consulting companies and financial institutions, as well as leading media.

The RENWEX 2020 exhibition is organised by EXPOCENTRE AO under the auspices of the Russian Chamber of Commerce and Industry.

The International Forum on Renewable Energy for Regional Development is organised by Non-Profit Partnership for the Development of Renewable Energy EUROSOLAR Russia.

The Russia Renewable Energy Development Association is a strategic partner of the exhibition and the event programme.
